March 1977

U.S. TOBACCO EXPORTS IN 1976 TOPPED IMPORTS BY $1 BILLION

The net balance-of-trade contribution made by U.S. tobacco exports rose 15 percent in 1976 over the 1975 level and topped the $1 billion-mark for the first time. The value of tobacco-product exports jumped by one-third to $536 million. This gain, combined with leaf exports worth $921 million, boosted total U.S. tobacco exports 16 percent to $1.46 billion. The value of duty-paid imports of leaf and products was up 20 percent to $316 million.

IMPORT DATA EXPANDED

Beginning January 1, 1977, separate customs declarations are required for flue-cured, burley, scrap of cigar-tobacco origin, and other tobacco scrap. Duties remain unchanged on all categories.

Export Summary

Unmanufactured tobacco exports reached 262,064 tons during 1976, up 3 percent from the 1975 level. Sharply higher shipments to Japan more than offset lower takings by the European Community (EC). The larger movements to Japan were partially the result of abnormal shipping patterns, as 67 percent of Japan's total exports moved in January and December compared with 54 percent during these 2 months in 1975. Of the total 1976 U.S. unmanufactured tobacco exports, almost 30 percent moved during January and December, compared with 21 percent in 1975.

The 1976 value of unmanufactured tobacco shipments reached $921 million, up 8 percent from the 1975 total. The average export unit value rose only 5 percent to $3.50 per kilogram. A large portion of the 1976 leaf exports was from the 1975 flue-cured and burley crops, whose auction prices dropped 5 and 7 percent, respectively, compared with the 1974 crop exported during 1975. The slight increase in the average export price of leaf in 1976 resulted from higher processing and handling costs.

The value of tobacco product exports reached a record $536 million during the past year. Cigarettes set the pace again in 1976 as they increased 23 percent in quantity to 61 billion pieces and 38 percent in value to $510 million. Tobacco product exports now represent 37 percent of the total value of U.S. tobacco exports—up from 32 percent in 1975 and an average 28 percent during 1969-73. The dry-weight leaf equivalent of cigarette exports is estimated at 55,000 tons—about 45,500 tons of U.S. leaf and 9,500 tons of foreign leaf.

Unmanufactured Tobacco Exports

Flue-cured export volume dropped 3 percent in the past calendar year, but the value increased 6 percent. Volume totaled 171,800 tons, valued at $701 million. The farm-sales weight equivalent of this leaf is estimated at 229,800 tons, down only 2 percent from 235,600 tons shipped in 1975. Losses in the European market were largely responsible for the lower flue-cured exports as shipments to this market dropped 22 percent to 85,400 tons and value slipped 17 percent to $321 million.

The aggregate EC market was responsible for 20,000 tons of the 24,000-ton reduction in exports to Europe as this group dropped 23 percent to 68,000 tons. Value, however, was down only 18 percent to $253 million because of a 6 percent increase in the average value for leaf going to the EC.

U.S. exports to all but one of the member countries were down. France, a minor customer for this type, was the only exception during the past calendar year. Factors contributing to the reduced demand in the EC include: Competition from third-country suppliers who, under a Generalized Scheme of Preferences (GSP) quota, enjoy a 50 percent tariff reduction on flue-cured tobacco; a desire by manufacturers in the EC to continue reducing stocks built in 1974; soft cigarette demand during 1976; an apparent trend to milder cigarettes; and higher cost of U.S. leaf.

because the auction prices of the 1976 flue-cured and burley crops rose 11 and 9 percent, respectively. Much of the 1977 exports will be from these crops.

Manufactured tobacco exports, led by cigarettes, are expected to reach another record in 1977 and are currently forecast at $580 million, based on cigarette exports of 65 billion pieces.

Import Summary

U.S. tobacco imports for consumption dipped slightly in 1976. A total of 141,000 tons valued at $269.7 million was imported. The quantity and value were down 3 percent and up 19 percent, respectively. The average value increased 22 percent to $1.92 per kilogram. The lower volume of U.S. tobacco import trade reversed the trend of the past several years. This reversal can be attributed to a substantial decline in imports of flue-cured, burley leaf, and cigar filler categories, and a leveling off of oriental leaf and scrap imports.

Following the downtrend that began in the latter months of 1975, import activity in the flue-cured and burley category during 1976 was less than in the comparable months in 1975 for 9 of the 12 months. Manufacturers are continuing to resist the increasingly expensive foreign leaf. Stocks of these types of tobaccos currently being held by U.S. manufacturers reached a record 340,886 tons as of January 1, 1977.

Manufactured tobacco imports in 1976 showed a surprising 59 percent increase in volume. Nearly all of this was in the "Manufactured or Not Manufactured, n.s.p.f." category from Brazil. The average value per kilogram in this category dropped 17 percent from $4.38 to $3.63.

General imports during 1976 declined in quantity but increased in value. The volume dropped 8 percent to 158,400 tons and the value rose 15 percent to $392 million. The unit value jumped 25 percent to $2.48 per kilogram—a record and the first time it has topped the $2.00 mark. The greatest loss in quantity was in the flue-cured and burley category. Imports fell off sharply in the latter half of the year as 66 percent of the trade arrived in the first 6 months of the year. Arrivals of other cigarette leaf, mostly oriental type, gained in quantity and value with increases of 10 and 33 percent, respectively, from 1975 levels to 84,300 tons and $274 million.

Imports For Consumption

Total **Flue-cured and burley leaf** imports in 1976 were 13,700 tons valued at $20 million—a record value for this type leaf. Volume was down 17 percent compared with 1975's. As a share of total unmanufactured tobacco imports, flue-cured and burley leaf accounted for about 10 percent in 1976. While this share is somewhat lower than in 1975, these types remain the third-largest leaf import category following oriental and scrap. In addition, scrap imports includes a substantial quantity of mechanically threshed flue-cured and burley leaf.

Italy emerged as the single most important supplier of flue-cured and burley cigarette leaf to the U.S. market during 1976. Imports from this source, most of which are burley, increased 32 percent over 1975's level of 3,138 tons. The average price jumped from $1.08 to $1.34 per kilogram in 1976. The two other major suppliers, the Republic of Korea and Mexico, showed reduced shipments of 24 and 15 percent, respectively. Imports from Korea in this category are predominately flue-cured and amounted to 2,400 tons in 1976. Imports averaged $1.36 per kilogram last year, compared with $1.03 in 1975. Mexican imports—mostly burley—were 2,700 tons valued at $4.5 million ($1.66 per kilogram—22 percent greater than in 1975).

Imports of **other cigarette leaf** (almost entirely oriental) remained near 1975's level of 79,600 tons. As a portion of total imports, oriental tobacco again constituted a little more than half of the total quantity imported by the United States. The average price increased 29 percent—from $1.75 per kilogram in 1975 to $2.26 in 1976.

Turkey and Greece continue to be major suppliers of this kind of tobacco. These two countries accounted for 66 percent of the total "other cigarette leaf" category. This is down substantially from the 82 percent share averaged during the 1969-73 period. Yugoslavia, which had been the third-largest supplier, was replaced by Italy in 1976 when imports from this country increased 92 percent to 7,800 tons as opposed to 4,600 tons in 1975. Oriental leaf imports from Bulgaria continued their upward trend of 1975, going from 801 tons in 1975 to 3,250 tons in 1976. Manufacturers are continuing to diversify suppliers because of record prices in Greece and Turkey.

Cigar tobacco imports (excluding cigar scrap) reached 4,900 tons, down nearly 2,000 tons from the 1975 level. **Cigar wrapper** volume was 736 tons, compared with 661 tons in 1975. Nicaragua, Cameroon, and Honduras again were the primary shippers in 1976. Average value in 1976 went up 26 cents per kilogram to $10.89.

Cigar filler imports in 1976 were 4,200 tons valued at $9.8 million, reductions of 32 and 25 percent, respectively, from the previous year's levels. The average value was $2.34 per kilogram in 1976, up 20 cents from that in 1975. Indonesia and the Dominican Republic were the largest suppliers to the U.S. market of this tobacco type in 1976. The Philippines, which reduced its shipments nearly 42 percent, became the third-largest supplier last year.

Scrap (both cigar and cigarette) imports in 1976 were about the same as 1975's level of 38,100 tons. Increased imports from the Republic of Korea (65 percent), Brazil (27 percent), and the Philippines (15 percent) about equaled the reduced quantities taken from Argentina, Colombia, the Dominican Republic, Mexico, and other suppliers. The average value of scrap imported in 1976 was $1.33 per kilogram, compared with $1.26 a year earlier. For customs purposes, mechanically threshed leaf is classified as scrap tobacco and thus explains the relatively high value of this category.

Stem imports are becoming more of a commercial trade item. They rose to 4,861 tons in 1976 and were valued at an

average 36 cents per kilogram. In 1975, imports totaled 4,234 tons and averaged 28 cents per kilogram. Stem imports have no import duty in the United States and continued the upward trend established in recent years.

Manufactured Tobacco Products

Volume and value of manufactured tobacco product imports in 1976 increased to a record 7,900 tons valued at $46.7 million. The largest category, "Manufactured or Not Manufactured, Not Specially Provided For," increased from 4,000 tons in 1975 to 6,800 tons in 1976. While the three major suppliers—Netherlands, Sweden, and United Kingdom—showed price increases, sizable imports from Brazil at $1.75 per kilogram tended to reduce the average value for the total category by 75 cents to $3.63 per kilogram in 1976 as compared with $4.38 in 1975. The imports from the U.K. are cigarettes, smoking tobacco makes up the bulk of shipments from Sweden and the Netherlands, and the imports from Brazil are believed to be unmanufactured tobacco.

Cigar and cheroot imports were up by 18 percent to 737 tons and the average value rose to $26.25 per kilogram. The Canary Islands, Honduras, Jamaica, and Nicaragua were the largest suppliers of cigars and cheroots, accounting for 66 percent of total imports in 1976. **Cigarette** imports dipped slightly (5 percent) in 1976 to 355 tons. The United Kingdom continues to be the main supplier, contributing over 70 percent of last year's imports.

General Imports

General imports of unmanufactured tobacco dropped 8 percent in volume but increased 15 percent in value compared with 1975 levels. At 158,400 tons and $392 million, general imports (arrivals) exceeded imports for consumption by 18,000 tons and $122 million during 1976. This stocks buildup is expected to trigger another slowdown in general imports in the current year.

The greatest reduction in volume during 1976 was in the flue-cured and burley category, which dropped 39 percent from 36,200 tons to 21,100 tons. The three largest suppliers of this type leaf—Brazil, Italy, and the Republic of Korea—all showed reduced shipments of 25, 45, and 88 percent, respectively. Cigar filler and scrap imports also were down.

The average general import value rose 25 percent in 1976 from $1.98 per kilogram to $2.48 per kilogram. This sharp increase is primarily the result of the higher valued oriental leaf imports which increased 21 percent from $2.68 to $3.25 per kilogram between 1975 and 1976.

Foreign-Grown Stocks In U.S. Inventory

U.S. leaf dealers and manufacturers have been building stocks of foreign-grown tobacco for the past several years. As of January 1, 1977, stocks of these tobaccos rose to a total of 340,900 tons (farm-weight equivalent)—a record high compared with 251,000 in January 1974, only 3 years earlier.

WORLD CIGARETTE OUTPUT ACCELERATES IN 1976

World cigarette production expanded during 1976 as output increased 3.0 percent to a record 4,080 billion pieces from 3,961 billion produced the previous year when output rose only 2.4 percent. Most noteworthy developments were in the United States, Japan, and Brazil.

A 6.5 percent jump in United States output was the largest since 1973 and well above the 1.6-percent average increase during the prior 10 years. The United States accounted for more than one-third of the increase in total world production in 1976. In Japan, cigarette output fell 6 percent—the first decline in 20 years. Brazil's output stabilized in 1976 after averaging annual increases of 10 percent during the past 5 years. Japan and Brazil each had substantial price gains that affected cigarette production and sales during the past year.

World cigarette trade also rose in 1976 as exports and imports increased 9 and 4 percent, respectively, to 242 billion and 177 billion pieces. U.S. cigarette shipments rose by one-fifth and were responsible for well over half of the total increase in world exports. Switzerland and Bulgaria each contributed gains equivalent to 20 percent of the rise in total world exports. Almost all of the increase in imports can be attributed to the oil-exporting countries of the Middle East. The discrepancy between total world imports and exports results from incomplete statistics from importing countries and/or unreported cigarette trade in certain areas.

Output by Major Country

UNITED STATES. Cigarette output was up 6.5 percent in 1976 as manufacturers rebuilt inventories and filled export orders. Inventories and exports each increased by an estimated 11-12 billion pieces. Domestic consumption, however, was up only 1.4 percent or about 9 billion pieces. Per capita use remained at about the 1975 level; the overall increase resulted from a slightly larger smoking-age population. The primary reasons for the soft domestic demand last year were a 13 percent price hike and continuing anti-smoking programs.

Although total domestic sales were sluggish, growth rates among the heavily promoted low-tar, low-nicotine cigarettes are estimated to have significantly outpaced established brands. The market share for this category is now estimated to be 20 percent and growing. The switch to the low-tar, low-nicotine cigarettes is expected to continue in the current year given present promotional and anti-smoking campaigns.

The outlook for 1977, based on current indications including estimated first-quarter production, is for total cigarette output to be somewhat below the 693 billion pieces made during 1976. Inventories will likely drop, exports are expected to further increase, and domestic consumption may rise at about the 1976 rate. The key factors determining the actual level of production will be exports and inventory changes.

JAPAN. Cigarette production fell 6 percent during 1976 to 275.6 billion pieces, following two decades of consecutive increases. The fall in 1976 production resulted from a 3.4 percent decline in domestic consumption. Cigarette sales in late 1975 rose sharply as consumers reacted in anticipation of the price hike that took effect on December 18, 1975. The combined effect of consumer stockpiling and resistance to the 48-percent higher prices was a drastic drop in sales during the first 8 months of 1976. However, sales have recovered and in the last 4 months of 1976 were up 5 percent compared to the same period in 1975.

Sales of most major brands were off, following the pattern of total sales. There was one major exception as sales of a leading charcoal filter brand soared 18 percent to 84 billion pieces to capture the No. 1 spot in cigarette sales, capturing 30.6 percent of the market, up from 24.3 percent in 1975. The former number one brand, which has a plain filter, suffered an 18 percent loss of sales that dropped its market

share from 26.6 percent in 1975 to 23.3 percent in 1976.

Production is expected to recover in the current year and is currently forecast at 304 billion pieces, near the middle of the 1977 interval estimate of 283-326 billion pieces. (The phrase, "interval estimate" used throughout this publication is a statistically derived range that covers actual production 95 percent of the time.)

UNITED KINGDOM. The cigarette situation during 1976 was much more dynamic than was indicated by the 1 percent drop in cigarette production to 156.5 billion pieces. Substantial shifts among brands and categories were brought about by an unprecedented barrage of tax changes, industry advertising, and anti-smoking publicity. Although cigarette consumption dropped 1.5 percent from 132.6 billion to 130.6 billion pieces, the total weight of tobacco consumed domestically in cigarettes was down 3.5 percent from 96,400 to 93,200 tons. The largest loss was in the nonfilter category, which fell more than 12 percent from 17.8 billion (15,700 tons) to 15.6 billion pieces (13,700 tons). The consumption of filter-tipped cigarettes increased marginally from 114.9 billion to 115 billion pieces, but the weight of tobacco used dropped 1.5 percent.

The shift from plain to filter cigarettes in the U.K. market was caused by several factors. Early in 1976, Government and trade publicity on cigarette tar content began to cause many smokers to switch to low-tar filter-tipped brands. At about the same time the budget changed a portion of the excise tax from specific to ad valorem, a move that had two effects. First, it caused a price rise of 6 to 7 U.S. cents per pack, which shifted some smokers from the plain standard-size brands to the smaller brands. Secondly, because it favors king-size brands, the new tax structure prompted manufacturers to rush to introduce new king-size brands in anticipation of increased consumer demand.

The aggressive sales campaigns associated with the introduction of these new brands, and the counter moves by companies with established brands, led to price cuts that priced the king-size cigarettes below the popular standard-size brands. The price cuts and the heavy promotion caused a shift to king-size brands, which are also filter-tipped. The average weight of the tipped sector dropped from 703 kilograms to 691 kilograms per million cigarettes, indicating that the switch to the small, tipped brands had more effect on tobacco use than the shift to the larger kings.

The outlook for cigarette consumption in the United Kingdom is uncertain. The barrage of anti-smoking publicity and expected cigarette tax increases may cause British consumption to drop during the current year. Total cigarette production, however, will probably remain stable because of anticipated higher exports. The interval estimate for U.K. output is 152-170 billion pieces; actual output will likely fall in the lower portion of the range.

Another development in the United Kingdom to watch in the current year will be the sales of cigarettes containing tobacco substitutes. Brands containing as much as 40 percent tobacco substitute went on sale in July. The introduction of these brands was preceded by massive advertising programs. A recent Government committee report effectively forbids cigarette manufacturers to promote the new substitute brands by claiming they are safer. The success or failure of the new brands will therefore be determined by consumer acceptance of the taste and/or their preconceived notions as to the relative safety of the product.

WEST GERMANY. Cigarette production rose 3.4 percent to 145.9 billion pieces during 1976—the result of significantly higher exports and a moderate 2.3 percent increase in domestic consumption to 129.1 billion. Trade observers believe that production and domestic sales would have increased more had it not been for continued high unemployment/underemployment, the continuing drop in the number of foreign workers in Germany, and intensified anti-smoking campaigns. On the other hand, increases in the excise tax and consumer prices that occurred on January 1, 1977, were preceded by a limited amount of hoarding that inflated sales figures during the last months of the year.

The West German cigarette market has been characterized in recent years by a trend toward low-nicotine cigarettes. The market share of cigarettes advertised as low-nicotine (any cigarette with less than 1 milligram of nicotine in the main smoke stream) was 28 percent in 1976. However, not all low-nicotine cigarettes are advertised as such and this figure does not accurately reflect the actual situation.

A more relevant fact is that between 1961 and 1976 the average nicotine content of German cigarettes fell from 1.4 to .72 mg. Three-fourths of the 18 new brands introduced during 1976 were low-nicotine. Additionally, the German industry tends to attach more significance to condensate (tar) content of cigarettes. This indicates that the trend to the lighter and milder smoke likely will continue.

The implication of the trend to low-tar, low-nicotine cigarettes is that the market potential for U.S. leaf in West Germany will be reduced in the future. U.S. leaf is noted for its full-bodied flavor and aroma. The high nicotine content of U.S. leaf has been one of the qualities for which foreign buyers have been willing to pay a premium.

The outlook for 1977 German cigarette production is for another increase with production expected to fall in the lower end of the 147-159-billion-piece interval estimate. The national economic situation and export demand are the key factors that will determine the actual level of output.

BRAZIL. Cigarette production, at 117 billion pieces, increased a modest 1 percent during 1976 as a

39 percent price jump early in the year softened consumer demand. Output expanded 13 and 15 percent in 1974 and 1975, respectively, as consumers rapidly switched to factorymade cigarettes. The recent price increase, however, has slowed this transition and caused stagnant growth among the more expensive brands. As prices rose, smokers reacted by switching to less expensive brands, which are proliferating. Currently, there are 97 brands on the market—13 more than 12 months earlier. Seven brands, however, account for 83 percent of Brazilian sales.

The outlook for 1977 is dampened by another price hike of 36 percent early in the year. Cigarette production likely will increase very little from the 1976 level. The trend to lower-priced brands is expected to continue.

POLAND. Cigarette production rose 6 percent during 1976 for the third consecutive annual increase. Output approached 89 billion pieces, breaking the previous record production of 84 billion set in 1972. Poland's filter-tipped production rose 9 percent and captured 33 percent of the market in 1976 as compared to 32 percent in 1975. Output of cigarettes containing some U.S. tobacco rose from 1.8 billion pieces in 1975 to 2.6 billion in 1976.

Cigarette sales were up 5 percent in 1976 as the steady uptrend continued. There is no overt Government effort to discourage cigarette consumption in Poland and sales are expected to continue to rise. Per capita consumption reached 2,560 pieces in 1976, up from 2,078 in 1970. The interval estimate for 1977 cigarette output is from 83 to 97 billion pieces.

FRANCE. Cigarette production, at 86.5 billion pieces, was down 1 percent from the 87.4 billion produced in 1975, marking the first decline in 4 years. Domestic sales mirrored the decline in production, slipping from 82.2 billion pieces in 1975 to 81.3 billion in 1976. A cigarette price hike on July 1, 1976 was largely responsible for the lower sales. Prices of American-blend cigarettes increased 4 to 8 percent and French-blend cigarette prices jumped 17 percent. The disproportionate price increase for French-blend cigarettes resulted in a 3 percent decline in sales and caused their market share to slip from 87.1 to 85.4 percent. American-blend cigarette sales, on the other hand, were up 12.3 percent with a market share of 14.6 percent compared with 12.9 percent in 1975.

French consumption of filter cigarettes rose to 59.3 percent during 1976 compared to 52.7 in 1974 and 56.5 in 1975. In terms of volume, the uptrend of filter cigarette sales sagged somewhat in 1976. The gain over that of 1975 was a moderate 3.6 percent, compared to 14.3 and 12.9 percent increases in 1974 and 1975, respectively.

The increased market share of American-blend cigarettes has triggered criticism of the French Government by the French Federation of Tobacco Growers. They claim SEITA, the State-owned cigarette company, has been placed at a disadvantage by the recently enacted anti-advertising law that went into effect July 10, 1977. The Government's response is that the current slump was caused by the price increase and not by discriminatory Government action toward SEITA.

Based on first quarter performance American-blend cigarettes are expected to increase their share again in 1977. Total cigarette production is forecast at about 88 billion pieces. The 1977 interval estimate is from 81.7 to 94.1 billion pieces.

BULGARIA. The world's leading cigarette exporter, Bulgaria, increased output by an estimated 6 percent to 76 billion pieces during 1976. Over three-fourths of the production moves into export channels, with the USSR being the largest market. The outlook places 1977 production in the low end of the 76-93-billion-piece interval estimate.

ITALY. Cigarette output rose 9.1 percent to 73 billion pieces during 1976. Sales, however, increased only 1 percent with domestic brands up 9 percent and imported brands down 18 percent.

The Italian Tobacco Monopoly's price policy and the improved quality of domestic brands encouraged smokers to switch from imported to domestic brands. The sales of the leading Italian brand rose 25 percent to 32 billion pieces during the past year. The trend toward increased consumption of domestically produced brands is expected to continue.

The Tobacco Monopoly's major problem in recent years has been limited production capacity for certain brands. They are hopeful the long-term solution is the construction of a modern manufacturing plant that is expected to be in operation by 1979. In the interim, several cigarette plants are working double shifts to expand production. Domestic production during the current year is expected to be in the upper end of the 66-79-billion-piece interval estimate.

INDIA. Reversing a recent downtrend, India increased cigarette production by 7.5 billion pieces during 1976. Production in 1976 totaled 67.2 billion cigarettes, a 13 percent gain over that of 1975. All of the increase was in the filtered category, which jumped 29 percent from 16 billion to 22.5 billion pieces.

Output in the current year is expected to remain at the 1976 level or about in the middle of the 62-81-billion-piece interval estimate.

CANADA. Cigarette production in 1976 rose to 61.6 billion pieces, more than 5 percent above that of 1975. Sales, up 5 percent to 61.9 billion pieces, paralleled the higher output. This marks at least a temporary return to the average annual sales growth rate of 5.25 percent between 1949 and 1974. However, the 1976 increase may be somewhat misleading because it follows a 2.3-percent sales drop in 1975 when higher Federal and Provincial taxes were imposed.

Although the percentage of smokers is decreasing, the smoking population is consuming more cigarettes per person. A 1972 Government survey revealed that the average smoker consumed 17.8 cigarettes per day

in 1965 and 23.7 in 1972. The 1978 forecast is about 26 pieces per smoker per day. More female smokers and the trend for young smokers to increase consumption as they get older are two additional factors responsible for increased cigarette sales. Apparently, the voluntary advertising code adopted by the four major Canadian cigarette companies has had little effect on consumption.

The 1977 outlook, is for another increase in both production and sales. Output could reach the upper portion of the 60-65-billion-piece interval estimate.

INDONESIA. The petroleum-based economic upturn fostered an 11 percent increase in cigarette production during 1976, jumping from 54.6 billion in 1975 to 61.6 billion. Sharply higher demand for the "kretek" (clove) cigarettes offset lower "white" cigarette production. "Kretek" output, which accounts for over 60 percent of total production, was up by almost one-fourth because of strong domestic and export demand.

SOUTH KOREA. Total output of cigarettes in 1976 reached 55.1 billion, 5 percent above that of 1975. The switch to filter-tipped continued as tipped production rose 7 percent and output of plain cigarettes dropped 5 percent. There was a very slight increase in stocks, as 1976 sales totaled 54.2 billion pieces—slightly less than production. The Korean Office of Monopoly produces two high quality cigarettes that contain about 40 percent U.S. leaf. The sales of these two brands totaled 5.5 billion in 1976 up from 1.3 billion in 1975, and reportedly, production has not kept pace with demand.

The Korean economy is booming and with increased consumer buying power, cigarette sales are expected to continue to expand in the foreseeable future. The Monopoly's production plan for 1977 calls for 58.1 billion pieces, 47.4 billion (82 percent) of which are to be filter-tipped.

TURKEY. Cigarette production showed only a slight increase in 1976 with a total of 53.0 billion pieces. The supply of filter-tipped cigarettes has lagged behind demand for several years and during the second half of 1976, additional machines were installed to increase production capacity. However, the increased capacity did little to improve the situation, as power shortages prevented any appreciable increase in output last year.

Turkey recently signed an agreement with Yugoslavia for the manufacture of Turkish filter cigarettes in Yugoslavia. Turkey will ship 600 kilograms of leaf tobacco to Yugoslavia for every ton of cigarettes sent to Turkey. Turkey hopes to reduce its burdensome leaf stocks and at the same time overcome the shortage of filter cigarettes.

PHILIPPINES. Cigarette production, up marginally to 51 billion pieces during 1976, approached the record 1973 production of 51.2 billion. Native cigarette production, which accounts for about one-fourth of total output, was about the same as in 1975 while that of American-blend cigarettes was up 5 percent to 39 billion pieces. Two-thirds of the American-blend cigarettes were mentholated and almost all of them were filter-tipped. In contrast, only one native brand is tipped and none is mentholated.

Cigarette sales in the Philippines during 1976 were up 7 percent to 50 billion pieces as American and native types rose 8 percent and 3 percent, respectively.

Manufacturers continued to use increasing quantities of U.S. leaf to produce several U.S. brands under license. U.S. leaf exports to the Philippines reached 5,900 tons in 1976.

The 1977 outlook is for another boost in production, which will likely fall near the center of the 49-59-billion-piece interval estimate. The gradual shift to American-blend brands is expected to continue.

Cigarette Trade

EXPORTS

World cigarette exports totaled 241.8 billion pieces in 1976. This was 9 percent more than the previous year and the largest percentage increase since 1971.

Six countries currently dominate world cigarette exports with combined shipments representing 80 percent of the total trade. They are, in order of market share, Bulgaria, the United States, the United Kingdom, Switzerland, West Germany, and the Netherlands.

Bulgaria continued to be the largest exporter of cigarettes with 1976 shipments of 62.0 billion pieces, or 26 percent of the world total. The bulk of Bulgarian exports go to the USSR.

United States shipments rose nearly 23 percent to 61.4 billion pieces in 1976. Export value rose 38 percent to $510 million, reflecting a unit value increase of 13 percent. The European Community, which in 1975 received 20 percent of U.S. cigarette exports, increased its takings 7 percent to 16.4 billion pieces, with the greatest volume going to Belgium-Luxembourg for redistribution. Prospects are good for another substantial increase in U.S. cigarette exports in 1977.

The United Kingdom exported 25.9 billion pieces in 1976, which accounted for 11 percent of the world total. The 3 percent increase in 1976 exports was because of larger cigarette sales to the Middle East.

The outlook for 1977 is for exports to continue to rise, offsetting an expected drop in domestic consumption. Growth in U.K. cigarette output during the next few years may depend on the export market, as higher taxes and increased anti-smoking pressure are expected to continue to retard domestic sales.

Switzerland realized a 22 percent increase in cigarette exports in 1976 with total shipments of 19.4 billion pieces. Yugoslavia remained the leading market for Swiss cigarettes, a position they have held

for 4 years. Belgium-Luxembourg became Switzerland's second biggest market in 1976 as Sweden fell to third place. Shipments to Italy continued to drop, primarily because of the continued weakness of the Italian lira versus the Swiss franc and efforts by the Italian Cigarette Monopoly to upgrade the quality of its brands.

The Federal Republic of Germany increased cigarette exports by 2.2 billion pieces in 1976 to a record 18.2 billion pieces. Nearly 90 percent of these shipments went to other EC members, with Italy taking slightly over half of Germany's cigarette exports. A large part of German cigarette exports is re-imported from low-tax neighboring countries by German commuters and tourists. The outlook is for higher cigarette exports in 1977.

Cigarette exports from the Netherlands dropped 22 percent to 10.1 billion pieces in 1976. This follows an 18 percent drop in 1975. Declining shipments to Italy, the primary market for Dutch cigarette exports, caused the lower exports in both years. Reportedly, financial problems with the Italian Monopoly caused the decrease in this trade. An active program by the Italian Monopoly to encourage consumption of Monopoly brands at the expense of imports will likely mean little growth for Dutch cigarette exports to Italy during 1977.

IMPORTS

Although world cigarette imports continued their uptrend in 1976, the 4.8 percent increase was the smallest in 10 years. Total world imports, at 177.4 billion cigarettes, were up 7 billion pieces from 1975 and 73 percent above the 1968-72 average.

The USSR maintained its position as the world's largest importer of cigarettes with imports totaling 54.9 billion pieces. Soviet purchases accounted for 31 percent of total world imports in 1976. It is estimated that more than 90 percent of the USSR's cigarette imports are manufactured in Bulgaria.

Italy remained the second largest importer with imports of 19.7 billion pieces in 1976. However, these imports were 18 percent below those of 1975 because of domestic price adjustments designed to encourage smokers to buy brands produced by the Italian Monopoly. Imports from the Netherlands suffered most, dropping from 13.0 billion to 7.8 billion pieces. Imports from West Germany on the other hand were up by 1 billion pieces to 10 billion. Expanded production capacity in Italy will probably further reduce cigarette imports in 1977.

France increased its imports 14 percent in 1976 to 7.9 billion cigarettes. Over 90 percent of these were from other EC members, with the Netherlands supplying 56 percent of France's total imports. Indications are for increased imports in 1977, with good prospects for American-blend cigarettes.

Iran, which for years had been an insignificant importer of cigarettes, tripled its imports from 1974 through 1976. Most of these imports were from the United States and this trade is expected to continue to expand through the near term.

Hong Kong, the other major importer of cigarettes, registered a 16 percent increase to 6.9 billion pieces in 1976. Slightly over three-fourths of Hong Kong's imports were from the United States. The market share for U.S. cigarettes increased from 74 percent in 1975 to 79 percent in 1976.

1/ Intercept - trend value of production when X equals zero (i.e.: X - 0 = 1959). 2/ Slope - the change in the trend value of production for a one unit change in time (i.e.: annual change). 3/ A value between 1 and -1 that measures the degree of linear association between time and production. The larger the absolute value of (r). the higher the degree of linear association between them. 4/ A measure of the amount of variation of the actual production from its trend values. 5/ Ninety-five percent confidence interval: it can be said, with 95 percent confidence, that the cigarette production will fall within the interval.
